

EYENETRA

Hello Everyone!

We've released an exciting feature for our products that enhances communication with patients throughout their eye exam. Now you can screen share the images on the NETRA, Netrometer and Insight EMR App to your TV or monitor. All you need is a chrome cast-enabled screen!

Use this feature with the NETRA for a comprehensive training experience or monitor patient progress. Collect and display information about the patient's current lenses with the Netrometer. Access our Insight Platform on your tablet, and have your patients easily see and check their information.

We hope you like it! The goal is to transform the exam room into a fun and engaging experience for the patient.

We will keep our focus on the patient experience. As always, please let us know if you have any questions!
