F: 305-882-0140

Features:

- All durable metal materials.
- Anti-mildew and anti-moisture.
- Simple installation and operation, no focus adjustment.
- Compact and generous design.
- Light weight for easy carrying.
- Workable with Stereo indirect Ophthalmoscope to meet different posterior surgery requirements.

Image Inverter

Our image inverter is a kind of adapter, used to put between Objective Lens and Eyepieces Lens of an Operating Microscope to provide an upright image for the observer, while he is doing retina! vitreous surgery.

The image can be inverted by angle of 180°.

There is a thick metal stick to open and close, invert by moving up and down, without any focus adjustment needed. The operation is quite easy and convenient, even for beginners.

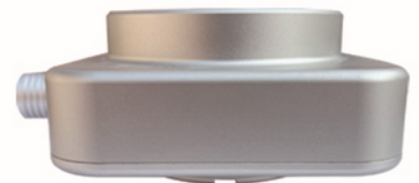

It is applicable to ZEISS, TOPCON, MOLLER, ALCON, TAKAGI, INAMI, LEICA & VISUMATE and many other Ophthalmic Operating Microscopes.
