MicroClear Hand-held Digital Slit Lamp is used for anterior segment imaging, diagnosis, especially for anterior disease screening.

Combining observation with imaging, it offers clearer observation and higher definition images of eyelid, conjunctiva, cornea, iris, lens and vitreous, etc.

With quick lens adjustment and light body, it is much easier and more convenient to be applied in rapid screening, out diagnosis, clinical observation and remote medical treatment.

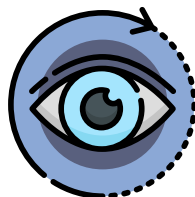

Features

- Real-time image display, 10 times magnification
- Brand new optical system, much larger field of
- Video function offering live data
- Easy operation and high definition imaging
- Multi data transfer and storage system
- Light weight 850g, movable and portable
